PRESS RELEASE

Preliminary statistical balance sheet of the MNB: July 2017

In July, forint liquidity of the domestic banking sector rose, which was mainly reflected in an increase in the average stock of credit institutions' overnight deposits. The average stock of currency in circulation continued to rise during the month. The average stock of external assets fell relative to June. The overnight interbank interest rate fluctuated in the lower bound of the interest rate corridor throughout the month.

⁵ From 23 September, the three-month deposit has been the MNB's policy instrument.

⁶ From March 2016, other items on both the assets and liabilities sides include swaps outstanding under Phase 3 of Pillar 2 of the Funding for Growth Scheme as well.

⁷ The stock of overnight deposits also includes the stock of preferential deposits.

The average and end-of-month stocks of **external assets** fell in July. The decline in the average stocks partly reflected the carry-over effect of the maturity of swap transactions related to the forint conversion of households' foreign currency loans in June, but the strengthening of the forint exchange rate in July also pointed to a decrease. Apart from the above, the maturity of a foreign currency bond, issued by the GDMA, at the beginning of the month also reduced further the value of end-of-month and monthly average stocks.

Following the zero stock in the past months the MNB disbursed **one-week loans** to financial institutions again in July, i.e. the average stock of lending rose.

In July, the MNB concluded one-, three-, six- and twelve-month transactions with credit institutions at the EUR/HUF FX swap tenders providing forint liquidity. The average stocks of swap transactions at the tenders are shown in Table 1 and Chart 7 of the chart-pack.

The **average stock of currency in circulation** continued to rise during the month (see Table 1 and Chart 5 of the chart-pack).

The monthly average of the banking sector's **current account** balances with the MNB exceeded reserve requirements by HUF 4.6 billion, the usual amount. In July, reserve requirements amounted to HUF 186.9 billion (see Charts 1 and 2 of the chart-pack).

In July, **forint liquidity of the domestic banking sector** continued to rise, which was reflected in declines in the average stocks of credit institutions' three-month deposits and a larger increase in the average stock of overnight and other deposits. The average monthly stock of three-month deposits has been declining steadily from month to month as a result of the introduction of a quantity limit on the instrument in October 2016.

The average and end-of-month stocks of **central government deposits** fell during the month. The decrease in average stocks partly reflected the carry-over effect of June, including advances of EU funds, in addition, the maturity of the GDMA foreign currency bonds also reduced the monthly average stocks.

The average and end-of-month stocks of **external liabilities** rose slightly in the month.

The **overnight interbank interest rate** fluctuated in the bottom half of the interest rate corridor throughout July (see Charts 11 of the chart-pack).
