

Monthly analysis of inflation developments

June 2014

Article 3 (1) of the Central Bank Act (Act CXXXIX of 2013 on the Magyar Nemzeti Bank) defines the achievement and maintenance of price stability as the Magyar Nemzeti Bank's primary objective. Assessments of inflation developments have key importance in monetary policy decision-making. The MNB attaches a high priority to informing the general public on a continuous basis and thereby to improving the transparency and predictability of its decisions. Consistent with this principle, the Magyar Nemzeti Bank produces publicly available analyses of its assessments of inflation developments and the extent of medium-term inflationary effects on a monthly basis.

The analysis has been prepared by the Economic Forecasts and Analysis Directorate and approved by Dániel Palotai, Executive Director responsible for monetary policy.

The publicly available analyses and the related statistical databases are accessible on the MNB's website at:

ASSESSMENT OF INFLATION DATA FOR JUNE 2014

In June 2014, the consumer price index stood at -0.3 per cent and core inflation at 2.5 per cent. Core inflation adjusted for the effects of indirect taxes was 1.4 per cent in the month.¹ Consumer price inflation edged down by 0.2 percentage points and core inflation was unchanged relative to the previous month. The fall in inflation in June was mainly accounted for by the decrease in the price indices for unprocessed food and tradables (Chart 1).

The Bank's measures of underlying inflation developments (demand-sensitive and sticky-price inflation) were broadly unchanged from May. The levels of the measures continue to indicate a moderate inflation environment (Chart 2).

Below is a brief analysis of changes in the prices of items determining medium-term inflation developments.

Tradables prices were unchanged relative to the same period a year earlier. The price dynamics of non-durable tradable goods continued to be moderate. Following the decline in the previous month, prices of durable tradable goods fell again in June.

Services prices rose by 0.4 per cent on the previous month (Chart 3), exhibiting slightly higher price dynamics compared with previous years. This reflected in part the increases in mobile call rates and internet subscription prices.

In seasonally adjusted terms, processed food prices rose slightly, relative to the previous month, mainly due to the increase in the price index for milk and dairy products.

Budapest, 11 July 2014

¹ In Hungary, tobacco products are included in the measure of core inflation. As part of the changes in the tobacco market last year, the retail margin was increased by the Government. The increase in the retail margin affects the consumer price index only temporarily, similar to an increase in indirect taxes, while it does not influence the assessment of longer-term inflation trends. Accordingly, in addition to the tax effects, the effects of the increase in the margin on tobacco products have also been eliminated from the core measure of inflation in calculating indirect tax-adjusted core inflation.

Chart 1: The consumer price index and core inflation excluding indirect taxes
(annual percentage changes, January 2007 – June 2014)

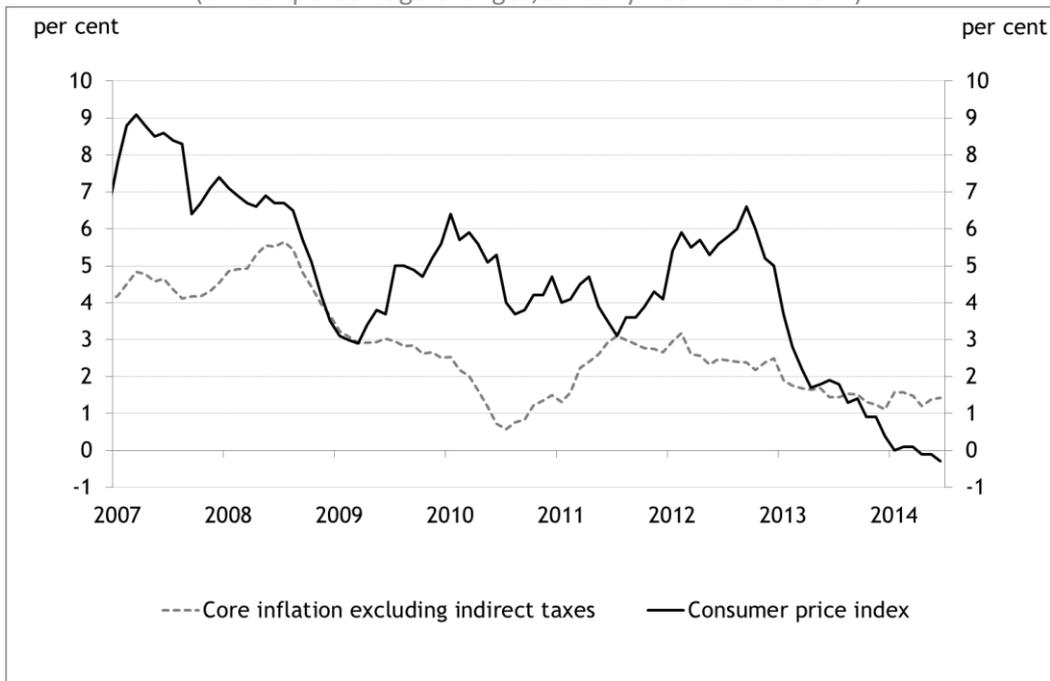

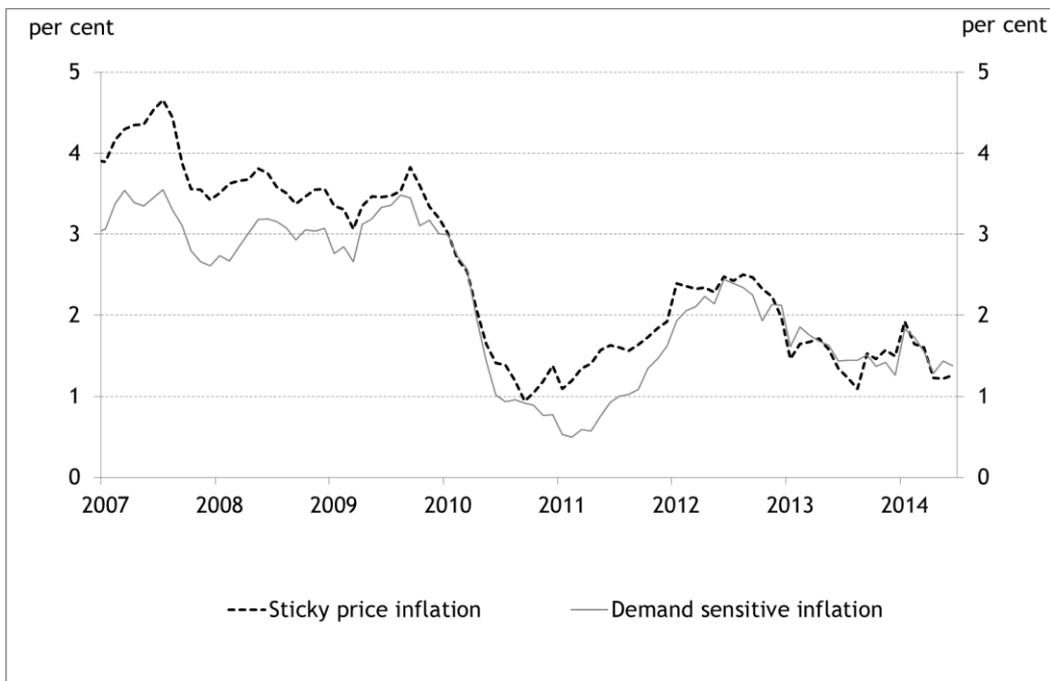

Chart 2: Underlying inflation indicators

(excluding indirect taxes, annual percentage changes, January 2007 – June 2014)

Note: Demand-sensitive inflation is derived by eliminating processed food prices from core inflation. Inflation of sticky-price products is composed of items of the consumer price index where maximum 15 per cent of elementary prices change monthly on average. MNB calculation based on data released by the CSO.

Chart 3: Services price inflation

(seasonally unadjusted, tax-adjusted monthly changes, January 2005 – June 2014)

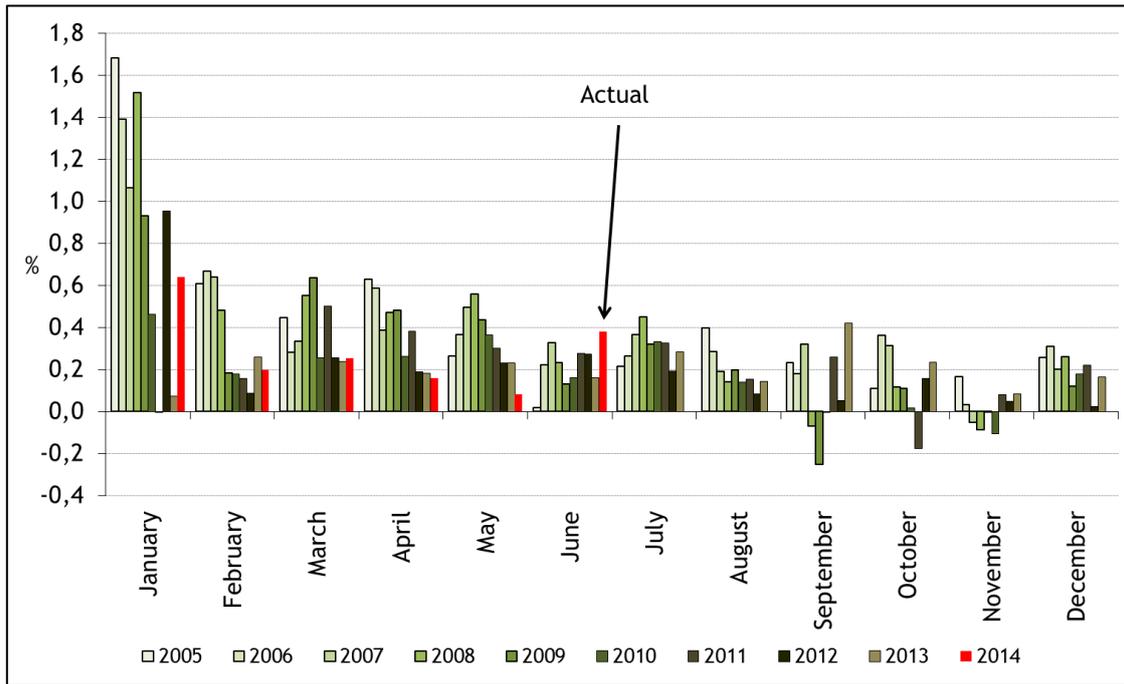

Table 1: Annual change in the consumer price index and contribution of the measures of underlying inflation

Consumer price index, June 2014 (CSO)					
-0.3% (annual change)					
MNB underlying inflation indicators (MNB calculation)					
Contribution of sticky price inflation (percentage point), weight 31,3%	0,4	Contribution of demand sensitive inflation (percentage point), weight 52,8%	0,7	Contribution of core inflation excluding indirect taxes (percentage point), weight 65.6%	0,9
Contribution of other items (percentage point)	-0,7	Contribution of other items (percentage point)	-1,0	Contribution of other items (percentage point)	-1,2
