

Monthly analysis of inflation developments

June 2016

Article 3 (1) of the Central Bank Act (Act CXXXIX of 2013 on the Magyar Nemzeti Bank) defines the achievement and maintenance of price stability as the Magyar Nemzeti Bank's primary objective. Assessments of inflation developments have key importance in monetary policy decision-making. The MNB attaches a high priority to informing the general public on a continuous basis and thereby to improving the transparency and predictability of its decisions. Consistent with this principle, the Magyar Nemzeti Bank produces publicly available analyses of its assessments of inflation developments and the extent of medium-term inflationary effects on a monthly basis.

The analysis has been prepared by the Economic Forecasts and Analysis Directorate and approved by Barnabás Virág, Executive Director responsible for monetary policy, financial stability and credit incentives.

ASSESSMENT OF INFLATION DATA FOR JUNE 2016

In June 2016, annual *inflation* stood at -0.2 per cent, *core inflation* at 1.2 per cent and *core inflation adjusted for the effects of indirect taxes* at 1.1 per cent (Chart 1). *Inflation* was unchanged and *core inflation* fell by 0.1 percentage points relative to the previous month (Charts 1 and 2).

The Bank's measures of *underlying inflation developments* (annual inflation rates of demand-sensitive and sticky-price products) were broadly unchanged compared with the previous month. The levels of the measures continue to indicate a moderate inflation environment (Chart 3).

The contribution of demand-sensitive products to inflation has been largely unchanged recently, while movements in the more volatile items, i.e. food and energy, more sensitive to cost changes, have continued to have a downward effect on prices, despite rises in the prices of food and energy in recent months.

Below is a brief analysis of changes in the prices of items determining medium-term inflation trends.

The annual inflation rate of *tradables* fell relative to May, but continued to be higher than the average of the past 16 months (Chart 4). Here, the prices of both *durables* and *non-durables* were broadly unchanged relative to the previous month. Movements in tradables prices mainly reflected the price reducing effect of moderate import prices and steadily rising domestic demand.

In June, the monthly increase in *services* prices was consistent with monthly price rises seen in previous years. Overall, prices showed moderate dynamics, which characterised a broad range of products (Chart 5).

Seasonally adjusted *processed food* prices were broadly unchanged in June.

Seasonally adjusted *unprocessed food* prices fell slightly, mainly reflecting the price dynamics of seasonal products, in particular fresh vegetables as well as fresh domestic and exotic fruits.

A broad range of *regulated* prices were unchanged compared with the previous month.

Households' inflation expectations have been largely unchanged in recent months and remained at moderate levels, in line with low underlying inflation developments (Chart 6).

Chart 1: Inflation decomposition

(annual percentage changes, January 2007 – June 2016)

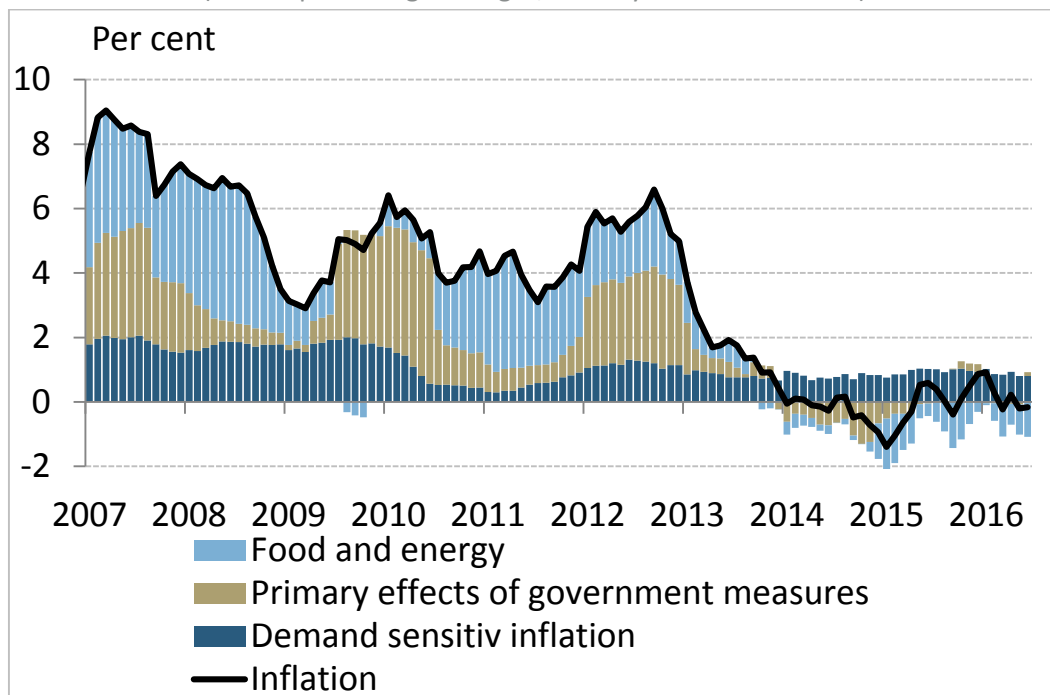

Chart 2: The consumer price index and core inflation excluding indirect taxes

(annual percentage changes, January 2007 – June 2016)

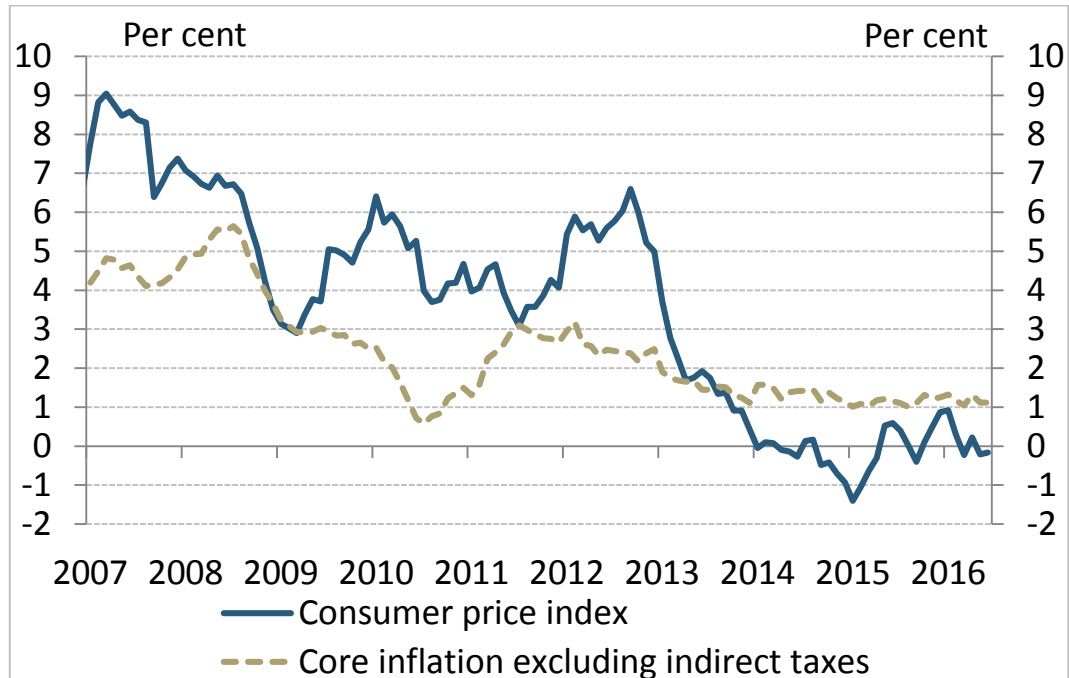

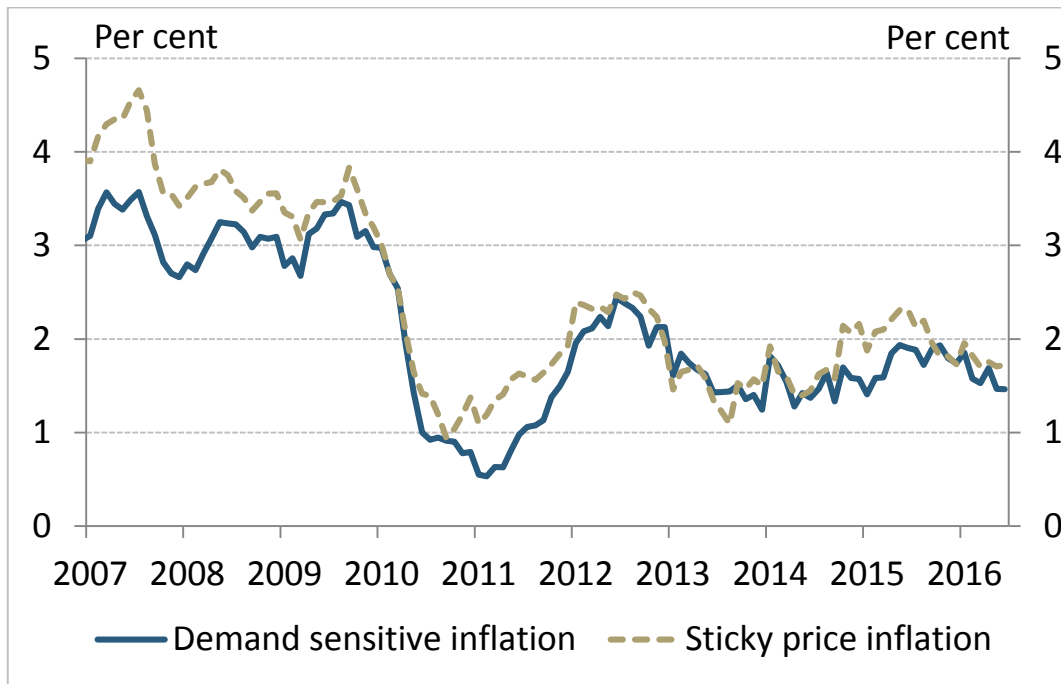

Chart 3: Underlying inflation indicators

(excluding indirect taxes, annual percentage changes, January 2007 – June 2016)

Note: Demand-sensitive inflation is derived by eliminating processed food prices from core inflation. Inflation of sticky-price products is composed of items of the consumer price index where maximum 15 per cent of elementary prices change monthly on average. MNB calculation based on data released by the CSO.

Chart 4: Inflation of tradable goods

(annual percentage changes, January 2007 – June 2016)

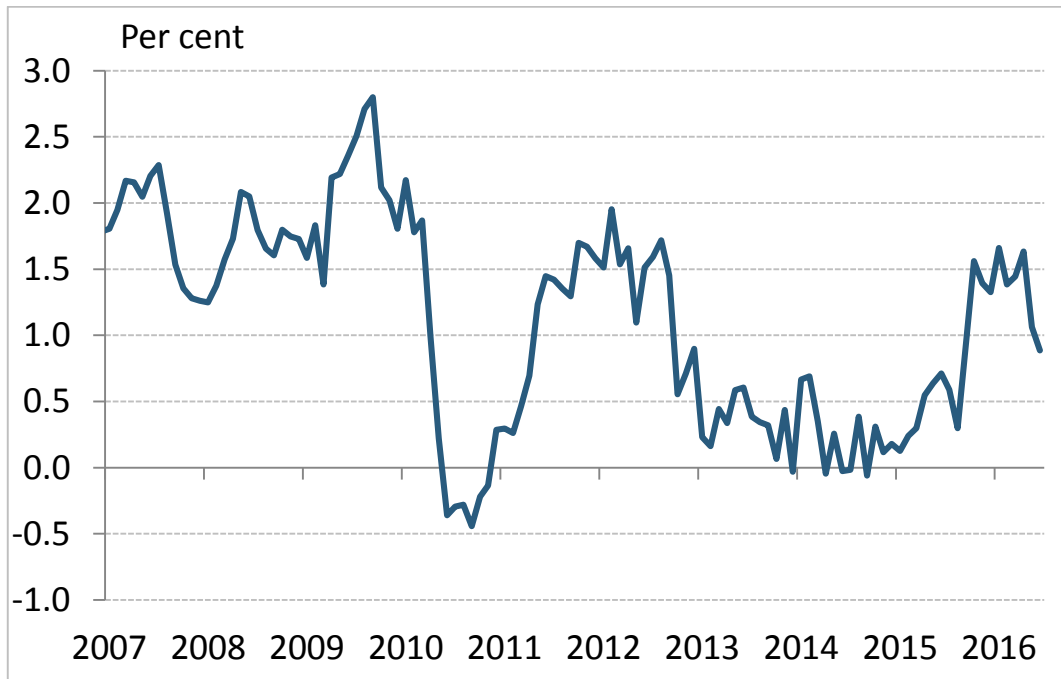

Chart 5: Inflation of market services

(seasonally unadjusted, tax-adjusted monthly percentage changes, January 2005 – June 2016)

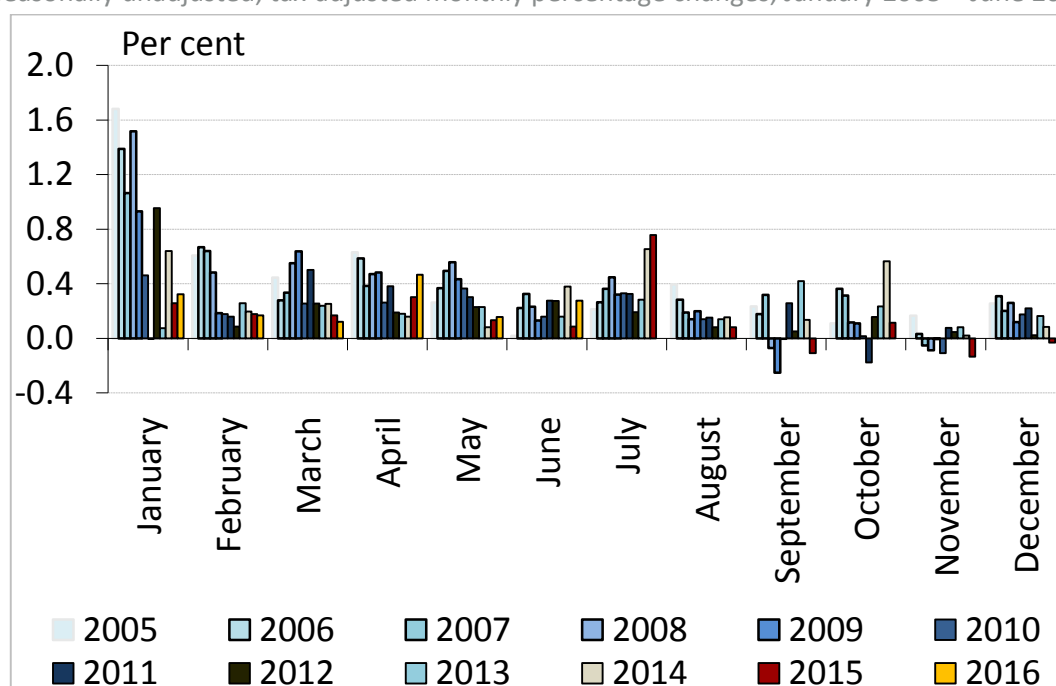

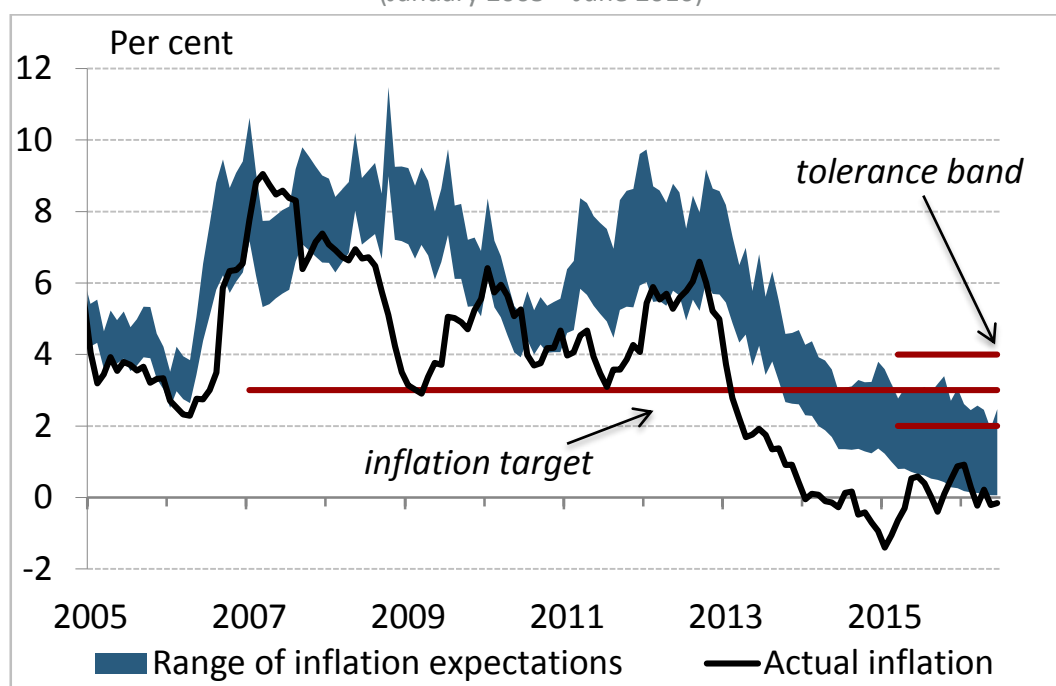

Chart 6 Households' inflation expectations

(January 2005 – June 2016)

Table 1: Annual change in the consumer price index and contribution of the measures of underlying inflation

Consumer price index, June 2016 (HCSO)					
-0.2% (annual change)					
MNB underlying inflation indicators (MNB calculation)					
Contribution of sticky price inflation (percentage points), weight 32.4%	0.6	Contribution of demand sensitive inflation (percentage points), weight 55.0%	0.8	Contribution of core inflation excluding taxes (percentage points), weight 67.9%	0.8
Contribution of other items (percentage points)	-0.7	Contribution of other items (percentage points)	-1.0	Contribution of other items (percentage points)	-0.9

Sources: CSO and the MNB's own calculations.

The sum of contributions may differ from the official figures due to rounding.
