PRESS RELEASE

Preliminary statistical balance sheet of the MNB:

April 2014

In April 2014, forint liquidity of the domestic banking sector fell relative to the previous month, reflecting a decline in the average stock of credit institutions' overnight deposits. Average holdings of two-week MNB bills rose slightly.

In April, forint liquidity of the banking sector fell, reflecting a decline in the average stock of credit institutions' overnight deposits. In contrast, average holdings of two-week MNB bills rose modestly. In the case of two-week MNB bills, holdings by the non-resident sector increased slightly, while holdings by the resident sector were unchanged.

The average of credit institutions' current account balances with the central bank was unchanged relative to the previous month. The average stock of currency in circulation increased slightly in the month (see Table 1 and Chart 5 of the chart-pack).

The averages of external assets and central government deposits increased, mainly as a result of the carry-over effect of the USD 3 billion government bond issue on 25 March.

Under Pillar 3 of the Funding for Growth Scheme launched on 4 April 2013, the Magyar Nemzeti Bank introduced a new euro liquidity-providing FX swap tender on 3 June 2013.¹ The monthly average stocks of FX swaps are shown in Table 1.

The monthly average of the banking sector's current account balances with the MNB exceeded reserve requirements by the usual amount.² Excess reserves amounted to HUF 6.4 billion, which continued to be moderate compared with the sector's total reserve requirements of HUF 415.69 billion (see Charts 1 and 2 of the chart-pack). The overnight interbank rate fluctuated near the lower bound of the interest rate corridor throughout most of April, occasionally rising close to the level of the central bank base rate (see Chart 12 of the chart-pack).

² Decree 13/2010. (IX.6.) of the Magyar Nemzeti Bank entered into force on 1 October 2010. The Decree allows credit institutions subject to reserve requirements to choose one of the reserve ratios specified in Article 1 (2) at most semi-annually. In the absence of such a choice, the lowest ratio will apply to required reserves, as specified in the Decree.

The seasonally adjusted data, published simultaneously with this press release in the [chart pack](#) and in the tables entitled '[Balance sheets of MFIs and the monetary aggregates](#)', are subject to more uncertainty than usual, due to fluctuations caused by the financial crisis.
