48. Skewness of exchange rate expectations

Source: Bloomberg

Note: based on option quotes for 1-month 25D risk reversal; skewness=RR/Volatility*10. Risk reversal can be regarded as a nominal indicator for the skewness of the distribution of exchange rate expectations, while skewness eliminates the effect of changes in volatility.

51. Open FX-positions of non-residents in HUF

Source: MNB.

Note: Based on the daily FX reports of the transactions with non-residents of credit institutions. Net HUF positions are calculated based on the change of cumulative FX-swap stocks and spot positions of non-resident market participants. 57. Forint FX-swap stock and cumulated HUF purchase of non-residents

Source: MNB.

Note: Based on the daily FX reports of the transactions with non-residents of credit institutions. An increase in net swap stock stands for an excess of swap transactions with a long forint spot leg, while a decrease stands for an excess of swap transactions with a short forint spot leg.
