

5 June 2001

PRESS RELEASE

Hungary's preliminary balance of payments *April 2001*

Provisional data may change when finalised.

According to the preliminary calculations, Hungary's current account was EUR 17 million in deficit in April 2001. The EUR 38 million deterioration in the current account balance relative to April 2000 was attributable to an increase in negative income, particularly in outflows of investment income on equity. The seasonally adjusted current account deficit was higher than in the preceding month. Net non-debt inflow amounted to EUR 50 million in the month under review.

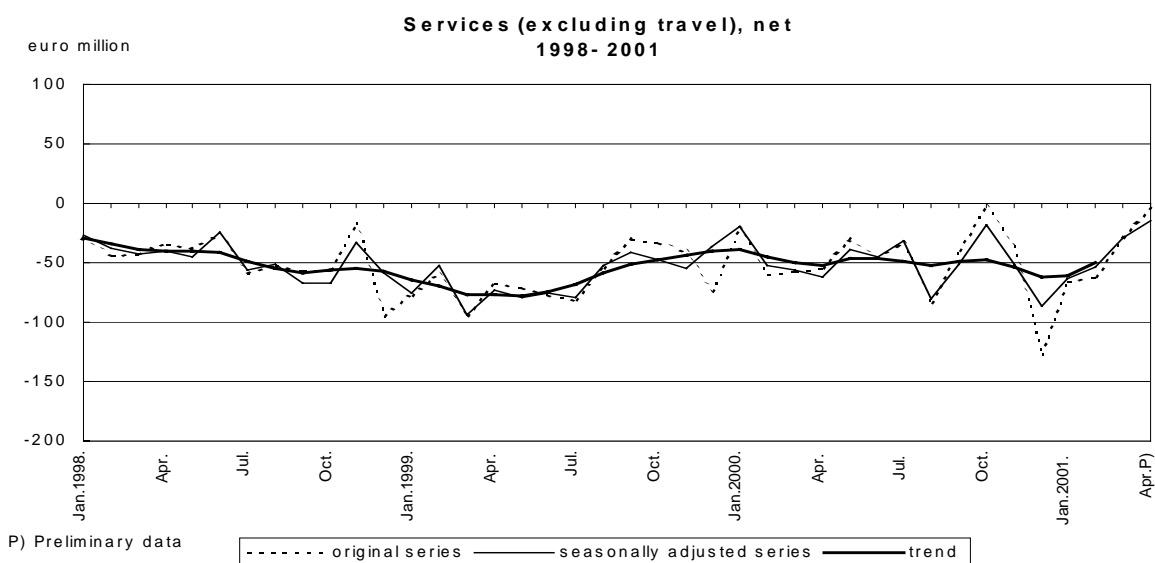

In April, net expenditures for trade in goods were the balance of EUR 2,667 million exports and EUR 2,689 million imports. The monthly values of exports and imports of goods rose by EUR 502 million and EUR 473 million respectively relative to April 2000. The seasonally

adjusted goods balance outcomes have been improving since the start of 2001, the April outcome being practically equal to that recorded for the preceding month.

At EUR 322 million in April, tourism revenue was EUR 15 million higher than a year ago. Expenditure, at EUR 101 million, was broadly flat in a year-on-year comparison. Eliminating the seasonal effects, the monthly tourism surpluses have been fluctuating around EUR 210–230 million since the summer of 2000. Service transactions excluding tourism were EUR 5 million in deficit. That was EUR 50 million lower than the deficit recorded in April 2000.

The investment income deficit amounted to EUR 258 million in the month. Under this heading, the negative balance for investment income on equity increased by EUR 111 million and that for investment income on debt by EUR 34 million relative to April 2000.

At EUR 47 million in April 2001, the surplus on current transfers was EUR 12 million higher than a year ago.

Non-debt capital transactions showed a total inward flow of EUR 50 million in the month. Net inflows via the domestic banking sector of direct investments in equity capital amounted to EUR 37 million. That resulted from direct investment transactions by non-residents in Hungary, at EUR 51 million, and those by Hungarian residents abroad, at EUR 14 million. Portfolio investment transactions in equity securities showed net inflows of EUR 13 million.

At the end of April 2001, the value of central bank foreign exchange reserves stood at EUR 12.5 billion.

^{a)} Methodological notes to seasonal adjustment:

The following method is used to seasonally adjust the components of the current account in 2001:

1) Using the SEATS TRAMO software, the model settings which accord best with the characteristics of the times series ending with the final data for December 2000 are fixed at the entire length of the year. The newly published data are adjusted within this model in the course of 2001. Taking account of the data for the latest month, the seasonally adjusted data for earlier periods will change.

2) In the publications, the direct method is used to adjust the accounts; and the individual items of the accounts, derived from the original data, are directly seasonally adjusted. Consequently, a seasonally adjusted sub-balance cannot be reproduced from the seasonally adjusted data that underlie the given sub-balance.

3) A trend value is the five-month moving average of the seasonally smoothed data, with diminishing weights proceeding symmetrically on both sides of the centre ($y_t = 1/9x_{t-2} + 2/9x_{t-1} + 3/9x_t + 2/9x_{t+1} + 1/9x_{t+2}$).

4) Compensation for employees does not reflect seasonal effects, therefore, the Table includes the not seasonally adjusted data.
