DISCLAIMER

The views expressed are those of the authors and do not necessarily reflect the official view of the Magyar Nemzeti Bank (the central bank of Hungary).

MOTIVATION

- ► The crisis of 2008-2009 hit many small open economies by tightening their external conditions
- ► The CEE economies provide a good laboratory
- Important differences in initial conditions and responses

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □

Evaluation and Policy

TABLE OF CONTENTS

Introduction

The Model

Evaluation and Policy

Conclusion

THIS PAPER

- The crisis: a permanent tightening in the cost of foreign borrowing (and a one-period drop in export demand)
 - Calibrate the model to Hungarian data, evaluate quantitative fit conditional on only two shocks
 - ► Counterfactuals: exchange rate regime, initial indebtedness
 - Is "optimal" policy conditional on initial conditions?
- Two-sector, flexible price model with money-in-the-utility and debt-dependent interest rate
 - Interest premium highly nonlinear, similar to credit constraint Go
 - Downward nominal wage rigidity (internal devaluation)
 - Currency mismatch

LITERATURE

- Nominal growth, model ingredients: Benczúr-Kónya (JIMF 2013)
- ► Real models of the current account and real exchange rates: Kehoe and Fernandez de Cordoba (2000), Bems and Hartelius (2006)
- Small open economy models with money: Rebelo and Vegh (1995) and Burstein, Eichenbaum and Rebelo (2007)
- Exchange rate regimes and financing frictions: Cook and Devereux (2006), Gertler, Gilchrist and Natalucci (2007), Brzoza-Brzezina and Makarsky (2011), Heer and Schubert (2012)
- ► Sudden stops: Curdia (2008), Christiano et al. (JME 2009)
- ► Valuation effects: Tille (2005)
- Downward nominal wage rigidity: Fahr and Smets (2010)

Introduction	The Model	Evaluation and Policy	Conclusion	
Model				

- Production: exports and nontradables, consumption: imports and nontradables
- ► Sector-specific investment with adjustment costs
- Money-in-the-utility and non-linear, debt-dependent foreign interest premium
- Endogenous labor supply, downward nominal wage rigidity
- Monetary policy: degree of exchange rate flexibility
- Small open economy with downward-sloping export demand

MECHANISM

- MIU implies households hold assets (money) in domestic currency; foreign borrowing assumed to be in foreign currency ⇒ currency mismatch
- ► Higher premium makes HHs poorer, debt more expensive
 - External rebalancing ⇒ exchange rate depreciates ⇒ mismatch exacerbated
- Fixed exchange rate protects HH balance sheets, but hinders CA adjustment through exports
- In standard models, valuation effects for CB reserves exactly offset this
 - Here, premium depends only on unconsolidated HH position
 - CB reserves earn lower interest rate

THE CENTRAL BANK

Per period budget constraint

$$\underbrace{S_t \left(B_t^c - R_{t-1}^c B_{t-1}^c\right)}_{\text{CB foreign reserves}} + D_t - R_{t-1}^d D_{t-1} + T_t = H_t - H_{t-1}$$

Policy rule in terms of exchange rate flexibility

$$\left(\frac{H_t}{H_{t-1}}\right)^{\rho_{\rm s}} \left(\frac{S_t}{S_{t-1}}\right)^{1-\rho_{\rm s}} = 1$$

Reserve policy

$$B_t^c = \rho_h \frac{H_t}{S_t}$$

▲ロト ▲御 ト ▲ 臣 ト ▲ 臣 ト ○ 臣 - のへで

CURRENT ACCOUNT

Private debt

$$B_t^h - R_{t-1}B_{t-1}^h = TB_t - \rho_h \left(\frac{H_t}{S_t} - \frac{R_{t-1}^c H_{t-1}}{S_{t-1}}\right)$$

Total debt

$$\underbrace{B_{t}^{h} + B_{t}^{c}}_{B_{t}} - R_{t-1}B_{t-1} = TB_{t} - \rho_{h} \left(R_{t-1} - R_{t-1}^{c}\right) \frac{H_{t-1}}{S_{t-1}}$$

- Money is not neutral!
 - Debt vs. reserves
 - Interest rate on reserves

< □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □ > < □

EXPERIMENTS

- ► We simulate the deterministic, nonlinear model
- Transition from an initial to a new steady state
 - ► Long-run NFA per GDP ($b_y = \bar{B}^h / \bar{Y}$): $-1 \Rightarrow 0$
 - Unexpected, permanent shock
 - (First period only: large decline in export demand)
- Counterfactuals
 - Different exchange rate regimes
 - Lower initial indebtedness

BASELINE RESULTS

- ► Data points: pre-crisis trends removed
- Model captures relevant movements qualitatively, often quantitatively as well
- Money drops too little, consumption too much, and NT relative price too little
 - Cumulative three period changes closer to data
 - Portfolio adjustment costs, illiquid assets?
 - Price rigidities?
- Employment, exports

Alternative exchange rate regimes

COUNTERFACTUAL RESULTS

- ► Flexible exchange rate
 - ► Employment falls less (DNWR), export sector declines less
 - Consumption drops more, because of valuation effects
- Fixed exchange rate
 - Employment falls more (DNWR), export sector declines more
 - Consumption falls less, because HH balance sheets are protected
- ► *Lower indebtedness*: flexible regime better for consumption

CONCLUSION

- ► We built a simple two-sector model to quantitatively evaluate the impact of the crisis of 2008-2009 in a small open economy
- Key features are external interest premium, currency mismatch, DNWR
- Model captures stylized facts well (even quantitatively)
- We highlight the interactions between the exchange rate regime and initial indebtedness
 - Export sector and employment vs. balance sheets and consumption
 - Exchange rate policy of central bank important for tradeoff
- Many things still to be explored! Regional comparisons
